

## **Installations:**

In guidance with the Door and Hardware federation as well as Glass and Glazing federation guidelines; CMS Garage Doors Ltd. have successfully trialled and implemented the following installation method to allow operations to continue during the Covid 19 pandemic.

Each morning temperatures of working staff are taken and they will be issued with PPE for the days work.

### **Installation:**

We have implemented the following methods for safe installation.

We will send a pre installation check list prior to coming out to fit your door via e-mail. Please ensure you read through and notify us if you cannot meet any of our requirements for safe working.

Our installers will contact the client 30 minutes prior to arrival and again as we pull up on site. The client must ensure we have a clear working area and vehicles have already been moved to allow our van's to locate on site correctly.

Each installation will have 2 x single crewed Van's to minimise contact with one another. (This is to be reviewed weekly). Please note that on garage door installation we must have the required space set out in the site preparation email, we will not move items to create space for ourselves as we would normally be happy to do and will not allow the client to do this in close proximity to our installation engineers on the day we are fitting.

We ask that you unlock the door and move away from the area into another room. If you need to move through the area in which we are working please notify us so we can move outside whilst you move through the area. We would ask that this movement is minimised where possible to allow minimal contact and efficiency of the installation.

On completion we will leave the keys / remotes in your preferred location, disinfect the area and move away from site disposing of used PPE into our own waste facilities. We will send you a link via e-mail to a hand over video specific to your door and product if this is required especially if it's an automated door. If you have any user questions, please don't hesitate to contact us.

Our installers are responsibly isolating outside of work & the installations are being carried out by our Managing director - George and lead fitter - Leon only during this time.

We kindly ask that you don't stand in the vicinity whilst they are fitting to allow free movement.

Thank you for your cooperation throughout this difficult time.

From the team @ CMS Doors.
